

Business Suite Overview

VDM Management Systems Inc. offers a complete accounting suite from a basic general ledger module to more complex modules which manage invoices, track job cost figures, process payroll and accumulate retail tax for fast and efficient remittance. Perfect for any construction or manufacturing business.

The advanced purchase order options allow for tracking of time and material costs from infancy to completion. Vendor invoice entry is managed to ensure that costs do not exceed the original order. Reporting provides management the ability to view the current state of all project costs.

Data can be stored in almost any relational database management system giving the client the ability to choose the one they feel comfortable with or may already have installed.
